

COLORADO HEALTH ACCESS SURVEY

2025

Public Use File Data Dictionary

COLORADO **HEALTH** INSTITUTE

NOVEMBER 2025

The 2025 Colorado Health Access Survey (CHAS) public use file (PUF) is a data file consisting of individual records from the 2025 CHAS. It is a free product provided by the Colorado Health Institute (CHI) to researchers and data analysts for use in health-related research. This document contains a complete data dictionary for the 2025 PUF.

The PUF can be used only for statewide and urban-rural estimates and not for local (sub-state) estimates. Health Statistics Region (HSR), county, and ZIP code data are intentionally excluded to reduce the risk of respondents being identified. To access these data and view the survey questionnaire, please go to <https://www.coloradohealthinstitute.org/research/colorado-health-access-survey-2025>.

Additional survey data, including geographic identifiers, that are not accessible in the PUF are included in the 2025 CHAS research file. This file will be available at the end of 2025 and must be requested by filling out and submitting a form on the CHAS website.

This document contains a complete list of the 2025 PUF variables. Additional detail on these variables, including the corresponding survey question and response options, is also provided in this data dictionary.

Please note that for ease of reading, questions have been edited to be read in the second person. For example:

Original text: Question A8. In the past 12 months, (have/has) (you/TARGET) had an appointment with a doctor, nurse, or other health care professional by video or phone? This is also known as telemedicine.

Edited text: Question A8. In the past 12 months, have you had an appointment with a doctor, nurse, or other health care professional by video or phone? This is also known as telemedicine.

Administrative variables — such as the statistical weights required for analysis — are presented in **Table 1**. All other variables are presented in **Table 2** with their accompanying questionnaire text. New or modified items on the 2025 CHAS are highlighted. A survey respondent is the adult in the household age 18 and older who completed the survey. The target refers to a randomly selected household member about whom the respondent completes most of the survey. Sometimes the respondent and target are the same person. Certain questions, such as sexual orientation, were only asked of respondents to the survey. These variables require analysis with a separate weight than the overall survey sample. This weight is named **wgt_so**, and the variables that require its use are denoted in **Table 2**.

Appendix A provides detailed information on all variables included in the PUF.

CHI recommends that anybody analyzing the PUF use a statistical software that accounts for weighting and complex survey design, such as SAS 9.4 or R. CHI also recommends consulting the full survey questionnaire at the previously listed website link to define numerators and denominators for survey items incorporating skip patterns. A separate simplified questionnaire is also available on the website but does not include skip logic.

Table 1. Administrative Variables and Descriptions

Variable	Variable Description
ID	Target ID
WGT_POP	Final trimmed population weight for complete sample
WGT_SO	Final trimmed population weight for respondent sample

Table 2. Variables included in Colorado Health Access Survey Public Use File

Highlighting denotes a new or modified item on the 2025 survey. Variables are presented in alphabetical order. Demographic variables are grayed out, as they can be used to understand information on either the entire survey sample or the respondent-only sample. A skip logic code of S10=1 designates that question as one that requires the wgt_so respondent-only weight for analysis. Please refer to the survey questionnaire when using the public use file.
